SOCIAL MEDIA AND CHATBOT

The Chatbot is an automated communication software that enables 24/7 customer support. Using artificial intelligence and an extensive knowledge base, the use of chatbots on social networks provides advantages such as:

- Improved customer support experience;
- Greater brand reach;
- Availability beyond business hours;
- Scalable service.

EXCLUSIVE WEBCHAT

Our WebChat offers text messaging, voice calls, and video conferencing functionalities.

Its main advantage lies in accessibility and ease of use: no installation is required, as WebChat can be accessed via a secure link.

WEBCHAT WIDGET

The Web Widget is an application embedded in a webpage to provide customers access to your support center.

It encourages customers to use self-service options whenever possible. Additionally, it simplifies getting assistance from an agent by reducing the steps needed to initiate a chat or submit a request.

INTELLIGENT BOT

NATURAL LANGUAGE PROCESSING (NLP)

Interpret queries based on free text or natural speech using a natural language processing engine.

INTENT DETECTION

Recognize new and ambiguous requests, categorizing them into pre-trained classifications to enable intelligent dialogue.

DOCUMENT COGNITION

Automatically generate FAQ lists by ingesting product descriptions, images, blogs, and terms of use from websites or documents.

SENTIMENT ANALYSIS

Understand the user's mood and classify it as positive, negative, or neutral. Identify the best course of action and involve human agents if necessary.

BIOMETRIC VERIFICATION

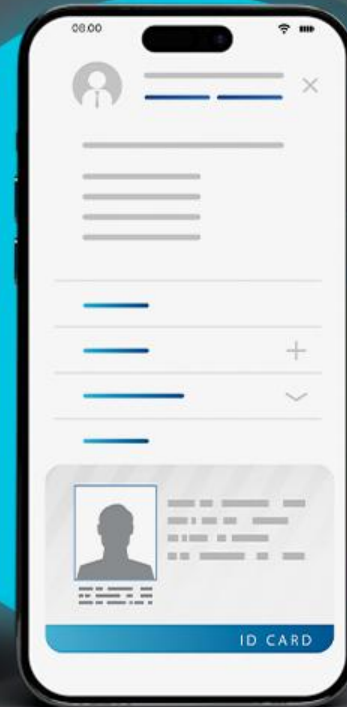

MAIN POINTS:

- High-security level;
- Liveness detection and facial matching;
- Effective identity verification;
- OCR for text recognition and full document data capture.

DOCUMENT SCANNING

OCR TEXT
Recognition and capture of all document data.

SELFIE MATCHING
Validation of three positions against document or database

PORTAL SUPPORT

Designed to provide dynamic and intuitive interaction, our Web Portal offers powerful tools that create the ideal environment for agents to manage requests across various communication channels.

GEOLOCATION

Identify addresses in real-time.

This feature can be used by bots to route or deny service as needed.

VIDEO CONFERRING

The support agent can initiate an audio and/or video conference through chat or social media, with the option to share real-time location and send files.

SUPERVISION

Our supervision tool provides a comprehensive and real-time overview of team performance, allowing for status tracking of queues and agent availability. It also enables efficient call distribution, with options for real-time monitoring and intervention during customer interactions.

REAL-TIME MONITORING

Real-time monitoring offers an instant view of key metrics and indicators such as:

- Call volume;
- Wait time;
- Average handling time;
- Abandonment rate.

CAMPAIGNS

Our service includes the mass dispatch of chats and calls triggered by predefined actions, automatically generating conversations via voice or social media platforms like WhatsApp, Telegram, email, SMS, among others.

CAMPAIGNS | STEPS

SELECTION

Automates candidate selection for contact.

AUTHENTICITY

Ensures human interaction, avoiding issues like voicemail responses.

QUALIFICATION

Analyzes collected responses and qualifies contacts.

EXECUTION

Identifies and prioritizes communication channels.

WORKFLOW

Navigates decision trees with personalized audio, images, and text generation.

INDICATORS

Provides detailed reports with leads and dashboards for real-time tracking.

CAMPAIGNS | USE CASES

SATISFACTION SURVEYS

Engages customers for surveys and real-time response analysis.

BILLING

Automated calls offering payment options and data updates.

PROMOTIONS

Automatic message dispatch with campaign feedback reports.

ORDER TRACKING

Keeps customers updated on delivery status.

IVR CALLBACK

Offers follow-up contact for customers in waiting queues.

TICKET CLOSURE

Follows up with customers for solution acceptance and ticket closure.

APPOINTMENT CONFIRMATION

Monitors and confirms/cancels appointments.

CRM DATA CLEANSING

Confirms and updates customer data via APIs.

RCS: THE NEW INTERACTIVE MESSAGING EXPERIENCE

RCS is a communication protocol designed to enhance traditional SMS functionality with advanced features similar to modern messaging apps like WhatsApp and Facebook Messenger.

Key benefits include greater processing capacity for sending messages (endorsed by Google).
